EDUCATION

The University of Washington | BS Computer Science, Minor Data Science

Expected Grad. Fall 2027

- Activities: UW Association of Computing Machinery, UW Interaction Design Association

TECHNICAL SKILLS

Languages: TypeScript | JavaScript | Python | Java | SQL | C++ | Swift

Frontend: React | React Native | Next.js | HTML/CSS

Backend & Databases: PostgreSQL | REST APIs | Node.js

Tools & Platforms: Git/GitHub | Claude Code | Cursor | Figma

EXPERIENCE

GoDaddy

June 2026 - September 2026

Data Analytics Intern | Seattle, Washington

- Building SQL and Python analytics pipelines in Amazon Redshift to measure prompt engagement and agent conversion rates across product experiments, providing product teams with consistent performance metrics.
- Converting pipeline logic into reusable Claude Skills that automate experiment analysis, metric calculation, and reporting workflows for product stakeholders.
- Developing Amazon QuickSight dashboards and executive-ready narratives that translate product usage and experiment results into actionable recommendations.

WIRED Studio

March 2026 - Present

Co-Founder, Design Engineer | Seattle, Washington

- Co-founded a design engineering studio delivering websites and digital platforms for student organizations and local nonprofits
- Develop and deploy responsive frontend experiences and backend-integrated web solutions using modern JavaScript tooling and CMS platforms
- Collaborate directly with clients from discovery through implementation, translating business needs into maintainable product experiences and scalable component systems

University of Washington

June 2025 - Present

Student Assistant | Seattle, Washington

- Support School of STEM front office reception (greeting guests, directing requests/questions, etc.)
- Routinely maintain email inboxes, reserve meeting rooms, and provide support for administrative tasks (ex. filing, resupplying, and checking out equipment)
- Coordinate, communicate, and document work with staff and faculty.

PROJECTS

Brew. | React Native, TypeScript, Google Maps API, Figma, User Research

- Leading development of a social café discovery app, translating user research into product requirements and building core functionality across search, personalized recommendations, location services, social features, and user profiles
- Developing café search and discovery systems with proximity-based filtering, need-based categories (quiet study, work-friendly, aesthetic interiors), and recommendation logic that ranks cafés based on user preferences and context
- Integrating Google Maps API for geolocation, distance and travel-time calculations, interactive maps, and in-app directions while building end-to-end flows for reviews, saved lists, social sharing, etc.
- Designing and implementing a personalized “For You” discovery experience with recommendation ranking and a TikTok-inspired carousel to surface relevant cafés and encourage continued exploration

Hackathon Management System | Java, PostgreSQL, React, TypeScript

- Built a full-stack hackathon management platform using Java, PostgreSQL, React, and TypeScript to support participant registration, judging workflows, and event administration
- Designed relational database schemas and backend APIs for role-based user flows, submissions, announcements, and scoring systems
- Developed frontend interfaces for multi-role experiences while implementing validation, access control, and structured data workflows
